

How to Assemble... Grid Feet to a Grid Panel

What you need:

- Grid Panel
- Pair of "L" or "T" Feet
- Set of Fixings

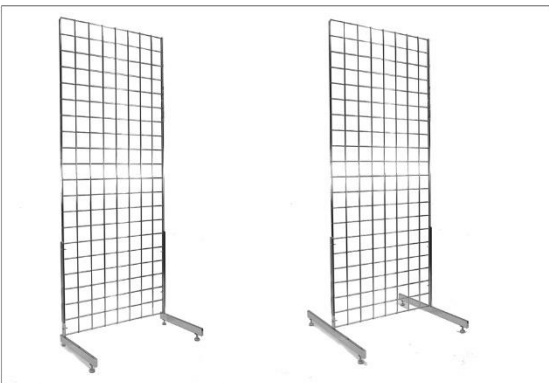

1.

Line up the bottom of the panel to the base of the foot upright (as pictured). There should be a gap between the floor and the panel.

2.

Using the pre-drilled holes in the feet, position the screws between the gaps of the grid panel edge. Tighten with the bolts provided.

3.

Repeat with second foot. Check all fixings are tightened sufficiently and the grid is aligned correctly.
